This enzyme has been used in the production of transgenic plants in which the nucleic acid is stably integrated into the host cell's genome and expressed. Such an enzyme can be used in the production of starch which is useful in the food industry or in the production of industrial products e.g. paper, adhesives, textiles, textile care products, building materials, soil stabilisers, agrochemicals, pharmaceutical products, cosmetics, coal briquettes, flocculants for parameteristics, foundry sand binders, rubber goods, leather contesting the contesting

They may also be used to isolate cDNAs and genes encoding homologous pullulanase from the same or other plant species, to amplify those genes and to produce antibodies for screening of cDNA expression

                                                                                                                                                                                                  can be recombinantly expressed using standard recombinant methodology. The GBS antigens of the invention can be used as vaccine components for the treatment or prophylaxis of diseases and symptoms mediated by Streptococcus infection, especially group A Streptococcus (S. pyogenes), GBS or S. agalactiae, S. dysgalactiae, S. uberis, S. nocardia, as well as Staphylococcus aureus. The vaccines are administered to those individuals at risk of GBS infection, particularly pregnant women and infants for sepsis, meningitis, and pneumonia, as well as immunocompromised individuals, such as those with diabetes, liver disease or cancer. The vaccines also have vetinary applications, such as for the treatment of mastitis in cattle. The present sequence represents a DNA encoding 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                     The present invention describes a novel nucleic acid sequence which is obtainable from potato plants and carries at least a portion of an isoamylase-type debranching enzyme (DBE) gene. Constructs containing the nucleic acid sequence can be used to alter the starch properties of plants such as potato, sweet potato, maize, wheat, barley, oat, cassava, pea or rice. The starch can have increased branching and/or shorter chain length, reduced peak viscosity, higher setback viscosity or increased viscosity onset temperature. By using an antisense sequence with greater homology to the native gene, greater inhibition can be achieved. The present sequence represents a pullanase type partial length potato DBE cDNA clone from the present invention.

Sequence 8, Application US/08478341
Patent No. 5817498

GENERAL INFORMATION:
APPLICANT: DEWEER, PHILIPPE
APPLICANT: AMORY, ANTOINE
TITLE OF INVENTION: PULLULANASE, MICROORGANISMS WHICH
TITLE OF INVENTION: PULLULANASE, MICROORGANISMS WHICH
TITLE OF INVENTION: PULLULANASE AND THE PREPARA'
TITLE OF INVENTION: PULLULANASE AND THE USES THEREOF
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: WILLIAN BRINKS HOFER GILSON & LIONE, P.C.
STREET: 2000 K Street, N.W., Suite 200
CITY: Washington
STATE: D.C.
COUNTRY: U.S.A.
ZIP: 20006
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER READABLE FORM:
WEDIUM TYPE: Floppy disk
COMPUTER READABLE FORM:
COMPUTER READABLE FORM:
APPLICATION NUMBER: US/08/478,341
FILING DATE: 07-JUN-1995
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Wilhlem F. Gaddiano, Esq.
REGISTRATION NUMBER: 37,136
REGISTRATION NUMBER: 37,136
REGISTRATION NUMBER: 37,136
REFERENCE/DOCKET NUMBER: 4121-45
TELEPHONE: (202) 429-0625

GENERAL INFORMATION:

APPLICANT: Beasley, Ellen

TITLE OF INVENTION: ISOLATED HUMAN G-PROTEIN COUPLED

TITLE OF INVENTION: RECEPTORS, NUCLEIC ACID MOLECULES ENCORPTION: PROTEINS, AND USES THEREOF

FILE REFERENCE: C1000918

CURRENT APPLICATION NUMBER: US/60/248,505

CURRENT FILING DATE: 2000-11-15

NUMBER OF SEQ ID NOS: 1998

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 127

LENGTH: 22788
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
